About The Game

Science Augmented! Creek Quest was developed to increase awareness and familiarity with endangered species and several common water quality indicator species. You can tell a lot about the quality of water in creeks and rivers just by looking at the critters that live in them. High quality recharge to the groundwater system benefits well owners and the endangered species that depend on our aquifers. This interactive, augmented reality card game helps you get to know these important critters, so the next time you're in a creek... you can check on the water quality yourself!

About Us

BARTON SPRINGS/EDWARDS AQUIFER CONSERVATION DISTRICT
WWW.BSEACD.ORG/AR

BSEACD is a groundwater conservation district charged by the Texas Legislature to preserve, conserve, and protect the aquifers and groundwater resources within its jurisdiction, which includes parts of Hays, Travis, and Caldwell counties in central Texas. Enhancing water quality, coordinating water conservation, and protecting the endangered Barton Springs and Austin Blind salamanders are key priorities for the District.
